

### QUARTERLY MARKET REVIEW

If the closing months of 2018 were defined by significant volatility and greater dispersion in sector returns, the first quarter at 2019 represented its complete reversal; stocks, credit and crude oil saw their best quarters in a decade. This was driven, in part, by the Federal Reserve and other central banks shying away from interest rate rises alongside an increasingly optimistic outlook on the geopolitical tensions between China and the U.S.

The market's risk-on sectors, namely information technology, consumer discretionary and communication services, led the charge, comprising almost 70% of the Russell 1000 Growth's performance; Facebook, Amazon, Apple, Netflix and Google stocks alone were responsible for approximately a quarter of the benchmark's swing back into positive returns. Large-Cap stocks similarly dominated the Russell 3000 Growth, with good returns in the small and medium capitalization segment of the market unable to keep up.

The U.S. maintained its lead over other developed countries, however investors, for the first time since 2007, saw the U.S. bond yield curve invert. As bearish participants have fled to the safety of government debt, we believe we are seeing greater angst at the late stages of an economic cycle regarding the market's return to high-growth behavior further dislocated from underlying business fundamentals.

### STRATEGY REVIEW

For the first quarter of 2019 the All-Cap Growth Portfolio outperformed its benchmark, the Russell 3000 Growth Index. While performance was largely driven by our stock exposure, on a sector level, information technology was the largest contributor and financials was the largest detractor from performance.

#### Contributors

**The New York Times Company**, the global publisher, was a contributor to performance during the quarter. The company's earnings reflected that the organization has reached new highs in digital subscriptions, totaling 4.3mm. Approximately three-quarters of the publisher's subscribers pay for digital subscriptions. Additionally, the 2018 year saw \$709mm in total digital revenue, meaning that after three years, the company is three quarters of the way to achieving its five-year goal of doubling digital revenue to \$800mm by 2020. We believe New York Times is becoming a high-quality digital subscription business without the content cost inflation inherent in entertainment oriented subscription models. We further believe that quality journalism is experiencing the early onset of increased consumer willingness to pay for content, and that these trends will drive value for the company over the longer-term.

**LiveRamp Holdings, Inc.**, a global technology and enablement services company, was a contributor to performance during the period. The company announced earnings, which showed total revenue of \$80mm, up 35% from the prior year period. Further, LiveRamp's subscription business grew 42%, driven by the continued strength of its enterprise and agency channels. We continue to believe that the company is well-positioned to drive value over the long-term given the combination of new management, an attractive SaaS data platform, and a strong balance sheet with excess cash.

**Portola Pharmaceuticals, Inc.**, a clinical stage biotechnology company that researches, develops and commercializes drugs, was a contributor to performance during the period. The company received FDA approval for the expanded supply of their lead drug AndexXa on the final day of 4Q18, and the company has seen its stock price appreciate since. We believe Portola represents an evergreen asset with little competition in a therapeutic area, and as such should drive value over the long-term.

#### Detractors

**Take-Two Interactive Software, Inc.**, a publisher and distributor of video games, was a detractor from performance during the period. While the company's results and execution have continued to exceed expectations,

the stock underperformed due to (i) stock correlation to peers EA and ATVI whose results missed consensus expectations and have disappointed investors for several quarters in a row and (ii) market concerns that "free-to-play" monetization mechanisms will undermine the Porter 5 of the console gaming industry, which we believe is untrue. Therefore, despite transitory choppiness, the fundamentals remain compelling and our long-term thesis remains unchanged, with TTWO in the early innings of its journey towards increased scale, profitability, and diversification, all of which is being underappreciated by the market. Additionally, the company's balance sheet remains strong with \$1.6bn in cash and short-term investments and zero debt.

**Biogen, Inc.**, a biotechnology company focused on neurodegenerative diseases was a detractor from performance during the period. The company announced it is discontinuing trials on what looked like a promising, high profile treatment for Alzheimer's, a disease which continues to have very limited treatment options. We believe the stock is overreacting at least somewhat given the disappointing clinical results that led to the halting of this high-profile drug. While we continue to believe there is plenty of intrinsic business value in Biogen's extant business and the rest of its pipeline, we are re-underwriting our stock thesis in order to make a final decision on the appropriate go-forward exposure to the name, which could result in a different weighting in the portfolio, or perhaps an outright exit.

**The CME Group, Inc.**, the financial market company operating options and futures exchanges, was a detractor from performance during the quarter. The company has suffered as a result of declining volatility levels across the capital markets, most notably a decline in interest rates in the US, which limits CME's trading exchange volumes. This, given a particularly strong 2018 which saw volumes up 18.4%, has encouraged shorter-term investors to realize gains on a stock which previously appreciated 32% in a down market. Regardless, we continue to believe that as the industry stands, the CME Group is a platform company with a natural monopoly in many of its futures and clearing products. The business is highly cash generative with low capital spending requirements. Furthermore, we believe there are multiple regulatory and structural changes that are creating favorable growth conditions for the CME Group.

## MARKET OUTLOOK

After significant positive absolute returns in the equity market over the past several years, sporadic volatility emerged during 2018, most notably in the fourth quarter. The volatility appeared to be both technical and fundamental, leaving investors continuing to struggle with accurately predicting the pace of global economic activity and assessing external factors that threaten economic fundamentals, such as central bank actions and fiscal policy debates across the globe. During the first quarter of 2019, the equity markets reversed course and resumed its multi-year run of strong absolute markets and elevated risk appetites. Previous market corrections over the past several years tended to be relatively quick, only to reverse before getting to any sustained level of investor risk aversion. This again seems to be the case as the 2019 year begins, and investors are focused on the interplay between technical and fundamental factors to determine whether the long, post-financial crisis economic and equity market recovery has come to an end or whether the late 2018 sell off will prove to be transitory.

Adding to investor consideration is President's Trump's unconventional style as a head of state and various controversies surrounding his administration that may hamper significant policy change. While the completion of the Mueller Report has so far passed with little controversy and disruption, we are mindful of the potential macroeconomic implications of President Trump's policy positions, including his comments and public positioning on global trade negotiations with China and political posturing on preferred candidates to be added to the Federal Reserve Board of Governors. We believe it is too early to determine the long term magnitude of such outcomes but we will closely monitor President Trump's tenure with a keen eye on the execution of significant policy shifts.

Nonetheless, regardless of policy outcomes and oscillating investor sentiment in any given period, we remain consistent in our long-term investment philosophy:

We want to own what we view as strong secular-growth companies with solid business models and competitive positions that we believe can grow market share and have the potential to deliver shareholder value in a variety of market environments.

PERFORMANCE as of 03/31/19	Current quarter	YTD	1 year	Since inception	Inception date	Gross expense	Net expense*
JS All-Cap Growth Fund IS Class	16.33%	16.33%	11.69%	13.00%	9/19/16	2.45%	0.90%

### IMPORTANT INFORMATION

Unless otherwise noted, the source of statistical information used in this document was FactSet.

The views expressed represent the Manager's assessment of the account and market environment as of 03/31/19 and should not be considered a recommendation to buy, hold, or sell any security, and should not be relied on as research or investment advice. Holdings are as of 03/31/19 and subject to change. Investments in small and/or medium-sized companies typically exhibit greater risk and higher volatility than larger, more established companies. Because this strategy expects to hold a concentrated portfolio of a limited number of securities, the portfolio's risk is increased because each investment has a greater effect on the strategy's overall performance.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The statutory and summary prospectus contains this and other important information about the investment company and may be obtained by calling 844.577.3863, or by visiting [www.jspfunds.com](http://www.jspfunds.com). Read the prospectus carefully before investing.

**Mutual Fund investing involves risk. Principal loss is possible. Small- and Mid-capitalization companies tend to have limited liquidity and greater price volatility than large-capitalization companies. The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater in emerging and frontier markets. Investments in Real Estate Investment Trusts (REITs) involve additional risks such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments.**

**Earnings growth is not representative of the Fund's future performance.**

The Russell 3000® Growth Index measures the growth segment of the U.S. equity universe. It includes those Russell 3000® Index companies with higher growth earning potential, as defined by Russell's leading style methodology. The Russell 1000® Growth Index measures the performance of the large cap growth segment of the U.S. equity universe.
